

FLUKE®

eMaint CMMS

Connected maintenance software

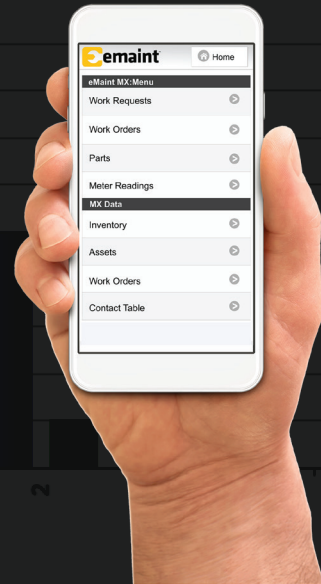

Emaint™

eMaint is an award-winning computerized maintenance management software (CMMS) system for managing data-driven maintenance operations. More than 50,000 users worldwide rely on eMaint to predict failures, eliminate downtime and improve reliability.

eMaint's cloud-based software was developed with customers in mind. Its configurable interface and intuitive functionality allow organizations to operate efficiently anytime, anywhere.

Part of the Fluke Accelix™ Connected Reliability Framework

Two of the most trusted names in maintenance connectivity, Fluke and eMaint, have joined forces as part of the Accelix Connected Reliability Framework. Accelix is a transformative set of tools, sensors and software that enables maintenance and reliability teams to become a business value engine — maximizing uptime, enhancing asset value and improving competitive advantage.

“ We are able to support our customers, deliver on objectives and ultimately drive growth by partnering with eMaint.”

Chris Hooge, Fleet manager at Boasso America

Features

- **Work management**
Generate work orders and submit work requests using a login, email or form
- **Preventive maintenance**
Generate preventive maintenance (PM) tasks, develop PM schedules on time or usage, and track inspections
- **Reporting**
Analyze trends and make data-driven decisions with robust reporting tools
- **Scheduling**
Schedule and assign work orders for greater control of your maintenance resources
- **Predictive maintenance**
Define boundaries for equipment operation, import readings and graph results
- **Mobile maintenance**
Empower technicians to access their CMMS in the palm of their hand
- **Inventory management**
Manage and track spare parts, suppliers and purchase orders
- **Asset management**
Establish asset hierarchies, track maintenance history and prioritize work
- **Multisite toolkit**
Standardize your data, get enterprise-level reporting, and gain inventory visibility
- **Interactive plans**
Visualize your asset data on a floor plan, schematic, site map, or any other image
- **Integrated condition monitoring data**
Automated flow of data from Fluke Connect sensors into the system to generate alarms based on asset conditional changes and work orders based on the alarm

“eMaint provides us with visibility into processes and the ability to make more informed, data-driven decisions.”

Jeffrey Martin,
Quality systems specialist at Schneider Electric

Real results

\$100K...reduction in operation expenses

98%.....increase in PM work completion

25%.....reduction in corrective maintenance

67%.....reduction in maintenance data entry

\$100K...savings, the result of having the right parts on hand

20%.....improvement in productivity

Renewal rates at more than 90%

eMaint's commitment to customer success extends far beyond creating exceptional CMMS software. The team goes to great lengths to provide organizations with all the resources and information they need to get the most out of our software and gain best practice insights for achieving maintenance success. The eMaint team has one goal: To provide prompt and personalized support and service that goes beyond customer expectations.
