Reliability

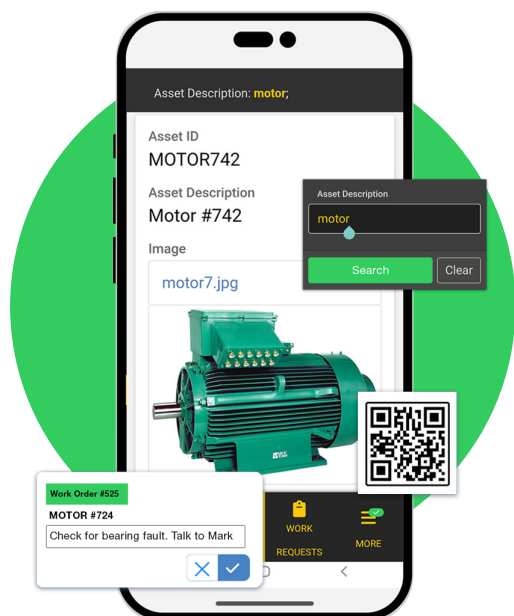

# Manage Maintenance On the Go

Our mobile app simplifies your work. Save time, unite teams, and work offline.

## Did you know?

Mobile devices save an average of 44 minutes a day per tech, and see higher adoption rates and ROI for their CMMS, compared to paper work orders.

### Work In the Field, Offline, Across the Globe

Connect your team 24/7. Real-time push notifications for faster response times. Work in remote areas with limited or even no connectivity and sync your changes later. Improve the quality of notes with in-the-moment data entry.

### Mobile Work Orders Make Life Easy

Manage, create, edit, and close work orders. Snap a photo, complete a checklist, and view documents. Save time not having to walk back to a desk or shop to log work or view instruction manuals.

### Find Failed Assets or Critical Spares with a Quick Search

Simply scan a barcode to explore asset details, BOM, and maintenance history on specific assets. See on hand inventory and book parts without having to walk back to a storeroom. Gather and upload meter readings to track asset condition.
